PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of experience building scalable, production-grade web applications using Next.js, NestJS, Node.js, Python/FastAPI and the MERN stack. Skilled in designing RESTful APIs, microservices architecture and real-time systems, with a strong background in AI agent systems, AWS cloud services, Dockerized deployments, CI/CD pipelines and high-performance distributed applications.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TanStack Start, Redux Toolkit, React Query, JavaScript (ES6+), TypeScript, Tailwind CSS, HTML5, CSS3
- **Backend:** Python, FastAPI, Node.js, NestJS, Express.js, REST APIs, GraphQL
- **Databases:** PostgreSQL, MongoDB, Prisma, Redis, Firebase
- **AI & Agent Systems:** OpenAI Realtime API, Voice-to-Voice AI Agents (WebRTC), CrewAI, LangChain
- **DevOps & Cloud:** Docker, Git, GitHub Actions, GitLab CI/CD, CI/CD Pipelines, AWS (EC2, VPC, S3, Lambda, IAM, RDS)
- **Coding & Automation:** Claude Code, Cursor, n8n, Zapier, Playwright

PROFESSIONAL EXPERIENCE

Full Stack AI Developer Jul 2026 – Present

Rissox *Islamabad*

- Building PakPays, a fintech operations and reconciliation platform with a controlled, auditable transaction workflow
- Built the NestJS REST API on PostgreSQL and Prisma, with Swagger documentation and versioned endpoints
- Built a bank-statement import pipeline that parses Excel and HTML exports with per-bank rules, prevents duplicate rows, and stores originals in private S3 served via signed URLs
- Implemented RBAC with department- and resource-level (ABAC) access scoping, plus an audit trail of user actions and status changes
- Built the React 19 + TypeScript frontend with TanStack Query and Table, Tailwind CSS 4, and role-based screens
- Set up Docker and GitLab CI/CD pipelines deploying to AWS, with Sentry error monitoring

Full Stack Developer Aug 2025 – Jul 2026

Centrox AI *Gulberg Greens, Islamabad*

- Developed and deployed scalable full-stack applications supporting 10k+ active users in production
- Architected and built REST APIs and backend services powering the platform, ensuring high availability and modular design
- Optimized backend performance with Redis caching and query optimization, reducing API response time from 1.2s to 280ms (60% improvement)
- Built and integrated 3 shared microservices (authentication, payments, notifications) reused across multiple product modules
- Established role-based access control (RBAC) for secure, permission-based user management across the platform
- Built CI/CD pipelines with GitHub Actions for automated testing and deployments, cutting deployment failures by 90%

Full-Stack Software Engineer Jun 2024 – Aug 2025
BeHope *I-8, Islamabad*

- Developed 20+ scalable REST APIs using Node.js and Express.js for an accounting platform
- Built an event-driven invoice ingestion pipeline using the Gmail API, Pub/Sub and Adobe APIs, reducing manual invoice handling by 70% and improving processing accuracy to 95%
- Integrated QuickBooks APIs to streamline expense tracking and reporting, consolidating 500+ monthly transactions into real-time financial dashboards
- Re-engineered the order-processing workflow end-to-end, cutting processing time by 90% and improving the delivery cycle, while designing a modular backend architecture for scalability

PROJECTS

PakPays - Fintech Operations & Reconciliation Platform NestJS, React, PostgreSQL

- Implemented RBAC (Super Admin, Admin, Operator) with ABAC-style scoping by department, broker and bank-account assignment, enforced in the service layer
- Used ACID-compliant PostgreSQL transactions (Prisma) for multi-step writes so related records are committed or rolled back together
- Built statement import with duplicate protection and Unclaimed / Tagged / Flagged review queues, with filtering and pagination across transactions
- Implemented full-text search over transactions using PostgreSQL GIN indexes
- Added payload encryption on sensitive endpoints, request rate limiting, and full audit history of status changes

AI Listener - Mental Health App ailistener.ai

- Built a microservices-based backend using NestJS, MongoDB and Redis caching, supporting a scalable architecture for 10k+ users
- Built cron jobs and background workers for scheduled processing, notification delivery and data synchronization, with Firebase Authentication and RBAC for secure multi-role access
- Optimized database performance using MongoDB indexing and aggregation pipelines across 40+ collections

Rankpage - Social Media Ranking Platform staging.rankpage.com

- Built a social platform for rank-based posts with interactive polls and pick'em predictions, plus a gamified expert system where users earn points and unlock "Expert" status
- Integrated Stripe payment workflows for premium features and monetization
- Built with TanStack Start and TanStack Query, Keycloak for authentication, and a Node.js/Express backend with MongoDB

BeHope - Healthcare E-Commerce Platform behope.ca

- Built an event-driven order processing system automating the workflow from order placement through supplier communication and fulfillment
- Built an invoice extraction pipeline with the Adobe PDF Extract API and Gmail/Pub/Sub triggers, syncing parsed invoice data into QuickBooks and eliminating manual invoice entry

EDUCATION

Bachelors in Software Engineering Oct 2020 – May 2024
National University of Sciences and Technology (NUST) CGPA: 3.42
